REZA AL HASAN

Product Designer | B2B Software, AI Interfaces and Design Systems

Dhaka, Bangladesh (UTC+6) | rezahasan1198@gmail.com | +880 1748409577

Portfolio: rezaal.netlify.app | LinkedIn | Seeking full-time product designer roles

PROFILE

Product designer turning complex B2B workflows into clear interfaces. I combine research, interaction design and engineering collaboration across restaurant systems, retail payments and evidence-led AI prototypes.

EXPERIENCE

Founder and Product Designer | Zevian, AI sales analytics

Feb 2026 - Present

- Used 10+ manager conversations to move from evaluation and patterns to investigation and decision. Replaced the dashboard in the current workflow with findings, evidence and manager context.
- Refined earlier KPI setup and dashboard hierarchy. Designed source-linked AI answers, visible uncertainty and manager controls.
- Defined Figma tokens and interaction states, then built the React prototype with Claude Code and Codex. The earlier scoring product reached two paying customers; the current investigation workflow remains a prototype.

Product Designer and Design System Lead | AutomatedPros, Orderific

Jun 2025 - Aug 2026

- Scaled a shared Figma system across six connected restaurant apps using auto layout, variants and global, alias and component tokens. Audited inconsistent components, added missing states and simplified reusable properties.
- Built component playgrounds, defined BMS RTL behaviour and extended existing dark mode. Worked with PMs and engineers to clarify interface fields and business meaning against a backend model of around 220 tables.
- Documented governance, handoff and onboarding rules; hired and mentored two junior designers and trained QA. Internal comparisons showed 28% less development time after handoff changes and half the onboarding time after the Figma guide.

Product Lead, Design and Product | Jayga, warehouse software

Nov 2023 - Aug 2025 | Featured storage scope: four months in 2024

- Designed client, admin and warehouse workflows with four engineers and the founder. Mapped service journeys, defined grid and billing rules, and owned the backlog; the founder held the product vision and final decisions.
- Designed quantity splits, grid assignment and stock verification. Delivered client and admin workflows and a mobile concept. Modelled up to 3x potential revenue per square metre through unbuilt rack-level pricing.

Product Designer | Purno, retail POS | Contract

May 2024 - May 2025 | Featured design scope: three months in 2024

- Designed inventory, checkout, local payments and owner reporting across desktop, tablet and mobile. The design prototype supported a pitch securing $10,000 in seed funding.
- Benchmarked five POS products and local payment gateways, explored product cards and simplified category navigation. Transaction-speed gains remain estimates.

ADDITIONAL SYSTEM WORK

Early Zevian HRMS: evolved an Ant Design-based concept with reusable controls and semantic variables. Separate from the current Zevian product.

SKILLS

Design: Figma, auto layout, variants, tokens, responsive UI, information architecture, interaction design, design systems and interactive prototyping.
Research and delivery: interviews, competitor analysis, journey mapping, requirements, design QA and engineering handoff.
Technical: React, Next.js, HTML/CSS, SQL, Supabase, Claude Code and Codex.

EDUCATION AND PROFESSIONAL DEVELOPMENT

Bachelor of Computer Science | Independent University, Bangladesh
The AI-Driven Product Designer; Data-Driven Product Management | LinkedIn
Google Project Management Professional Certificate | Google
